## MAKE TILE SHOPPING EASIER

## DIY TILE CALCULATOR

Easy to use professional tile calculating app for floors, walls, countertops, ceilings, and other areas.

Add your photos of the work areas and tiles for a quick reference or ideas while shopping.

Keep measurements simply by measuring the entire area, then subtract, via the app, the square footage of non-tiled areas such as windows, sinks, and kitchen island.

Calculate the number of tiles and/or boxes needed and the cost to cover multiple areas.

Areas can be divided into smaller squares to make measuring complex and intricate areas/layouts a lot simpler.

Use multiple tile sheets to keep a running total of all tiles and the cost for all areas.

Share the results with others via the app generated pdf file and email. Print the report to have a hard copy in hand while shopping.
